#### 1. Problem Statement

A bank generates secure codes using 3-digit numbers where each digit is unique, and the code must be divisible by 3. You are tasked with generating the first N such codes based on user input, ensuring the digits are unique and the number is divisible by 3.

Note: Use nested for loops to solve.

#### ***Input Format***

The first line contains an integer N representing the number of valid codes to generate.

#### ***Output Format***

The output prints N lines, each line contains a valid 3-digit code.
